## Rebuilt Appliances

We are now selling rebuilt appliances. We have a skilled technician who has been rebuilding appliances for over 25 years. We carry a wide variety of Washers, Dryers and Refrigerators that have been fixed and cleaned up. Every appliance we sell comes with a 6 month parts and labor warranty. We also offer Delivery, Installation and Haul Away of old appliance. We are constantly getting new appliances in, so give us a call and let us know what you are looking for!

# Must have appliance features!

*As technology evolves, so do household appliances. Here are some of the appliance features you might want to consider.*

As technology is constantly evolving the major Appliance producers are feeling pressure to come out with the newest features. Some of them are more convenient, some of them are energy efficient, and some of them are just for show. We will tell you which of them are worth the extra bucks!

**High power elements or burners** are great for bringing a pot of water to a boil in a pronto. This feature is great for heating large quantities fast. Also very convenient for types of cooking that requires high heat such as frying or searing.

**Auto load washers** are great if you are never sure what kind of load you are putting in. No longer will you have to select, small, medium, large or extra large; this feature will do it for you. It automatically determines the load size and then uses the amount of water needed for that load. This is very common in front load washers and even high efficiency top- load washers. This feature can end up saving you money on your water bill each month.

**Moisture sensor based dryers** have been available on most of the higher quality dryers for awhile. Moisture sensors do a better job of shutting off the dryer once the clothes are dry better than dryers with a thermostat. This feature is easier on the clothes,

not over drying them or causing thinner fabrics to burn.

**Elevator shelves on refrigerators** are a nice convenient feature. These shelves have a crank feature that allows you to adjust your shelf up and down without removing contents.

**Through the door ice and water dispensers** are features that are widely popular to consumers. This feature is most requested by consumers looking for a new refrigerator. While they are nice, they are prone to problems. Refrigerators with ice and water dispensers require considerably more repairs than ones without dispensers.

Next time you are out shopping for appliances you might want to check out some appliances with the features listed above.

## MARKS TIP: KEEPING YOUR GARBAGE DISPOSAL FRESH

To clean your garbage disposal run hot soapy water through it on a daily basis. To remove odors from your garbage disposal have it grind a cut up lemon or lime. You can also grind a bowl of ice every once in awhile. The ice cubes will help dislodge any stuck food or grease particles, while also sharpening the blades.

### **ATTENTION:**

*GE Appliances have recalled about 1.3 million of its GE, GE Adora, GE Eterna, GE Profile, and Hotpoint dishwashers because an electrical failure in the heating element can pose a fire hazard. If you have one of these brands you should be receiving a letter in the mail. You can visit this website for more information:*
